STUDENT NAME: KHOMOTSO MATSIMELA

MODULE NAME: WEB DEVELOPMENT 5020

TASK: WEBSITE PROJECT PROPOSAL 2

WEBSITE PROJECT PROPOSAL 2

Urban Style Fashion Store

1. Overview of the Organisation

Name: Urban Style Fashion Store

Urban Style Fashion Store is a fictitious clothing retail shop located in Polokwane, Limpopo. Urban Style Fashion Store will provide affordable and trendy clothing to the youth. Some products will include dresses, jeans, tops, jackets, shoes, and accessories.

Mission: Provide affordable and trendy clothing and ensure that our customers have an enjoyable shopping experience

Vision: To emerge as a popular fashion store in the locality which sells affordable and fashionable clothes.

The target market would primarily be made up of teens, students and young people interested in affordable fashion and clothes.

2. Objectives of the Website

The objective of creating the website is to develop an online platform where the customers can browse the products offered by the Urban Style store and communicate with the store.

The objectives are to:

Make the store more visible online.

Showcase the clothes and accessories.

Provide information about the products.

Generate customer inquiries.

Provide store contact details.

Make the site mobile-friendly.

Key performance indicators (KPIs) will be website visits, inquiries for products, number of contact forms submitted, and customer interaction.

3. Existing Website Analysis

The Urban Style Fashion Store is fictitious and thus does not exist now. The suggested website will be the organisation's first online website, and it will give the customer information about the products without going to the actual shop.

4. Proposed Website Features

The website will consist of at least five web pages:

Home – products highlighted and promotions.

About Us – information about the store.

Products – clothes and accessories with descriptions and prices.

Enquiry – customer enquiry form.

Contact – contact information and contact form.

HTML will determine the structure of the webpages, CSS will ensure styling while JavaScript will provide the site with interactive capabilities (MDN Web Docs, 2026).

5. Website Design and User Experience

The website will employ a black and gold colour scheme to achieve modern and stylish visuals. Product images will be large for visibility while headings will be clearly displayed to make navigation and information gathering easier.

Responsive design will be employed to allow the content to be viewable on mobile phones, tablets and desktops. Responsive design is preferred since it allows the content of the same website to be viewed on various devices (Google, 2025).

6. Technical Considerations

The website will utilize HTML, CSS and JavaScript as its technical elements. Web hosting and domain name will be necessary for the project.

7. Timeline and Milestones

Weeks	Activities
1	Researching organization and the website
2	Building sitemap and wireframe
3	Coding the HTML
4	CSS and JavaScript
5	Website testing, correction and finalizing

8. Budget

The budget for this website project is R3,000.
